## Exam 1 - Friday Feb 21 - Exam window: 4 PM to 7:59 PM

**Exam Date:** Friday, Feb 21/ The exam window starts at 4 PM and must be completed before 7:59PM.

**Exam duration:** 80 minutes

We will use Honorlock.

### Topics:

It will cover all the materials up to now.

- Lectures: Everything (including Python materials) up to Module 14.
- Assignments: Everything until the exam date.
- Quizzes: Everything until the exam date.
- Practice questions were posted. Mahmoud will go over these questions on Monday, Feb 17, at 12pm. The lecture video will be posted.

### What to bring to the exam?

- Your ID,
- Basic calculator
- Paper and pen/pencil for solving the problems

- No phone or any other additional items.

**Please refer to the Feb 10 in-person lecture video for detailed instructions and early preparation for your Exam.**

The exam will consist of a combination of multiple-choice questions and fill-in-the-blank responses. Additionally, several essay-type questions will only allow you to provide detailed solutions to demonstrate your understanding of the concepts. This is important because, in cases where the final answer might not be correct, you can still receive partial credit based on the depth and accuracy of your solution process.

Should you encounter any confusion or uncertainties regarding a question during the exam, you are encouraged to assume that you find it reasonable and proceed with your answer. Please clearly state this assumption within your response to the essay questions.

No emails containing solutions or clarifications will be accepted or considered during grading.

Best of luck in your preparation, and I look forward to your successful completion of Exam 1.
